Summary

Full Stack Engineer with 4 years of production frontend experience building scalable fintech, payment, and cybersecurity applications with TypeScript and React, plus hands-on Node.js, Express, and MongoDB project development. Strong in REST APIs, performance optimization, testing, real-time data flows, and maintainable architecture, with experience delivering reliable features across collaborative Agile environments.

Professional Experience

Front-End Engineer, Kachyng Inc

Feb 2024 – Jun 2026

Remote

- Optimized a React and TypeScript payment checkout application, reducing LCP from ~1.6s to under 800ms while maintaining green Lighthouse metrics and near-zero Total Blocking Time.
- Refactored a 2,500-line React monolith into modular feature flows and reusable components, improving maintainability and scalability across production payment workflows.
- Reduced JavaScript bundle payload by 200KB+ using tree-shaking, native browser APIs, and React.lazy/Suspense code splitting to improve application startup performance.
- Established Playwright E2E testing across desktop, mobile, payment, and iframe workflows, contributing to an 80%+ reduction in production incidents.
- Built reusable npm packages for authentication, payment workflows, and shared UI capabilities, supporting consistent TypeScript contracts and integrations across multiple applications.

Front-End Engineer, Auxin Security

Jun 2022 – Jan 2024

Karachi, Pakistan

- Designed a scalable React data layer with Redux Toolkit and RTK Query, integrating 8+ REST API services with centralized state, caching, and automated request handling.
- Built fault-tolerant authentication refresh middleware for concurrent API requests, preventing race conditions and improving session reliability across cybersecurity applications.
- Implemented RBAC with Redux Toolkit and custom React hooks, and integrated Socket.io real-time events for live security dashboard updates with reconnect handling.
- Migrated multiple React applications from Create React App to Vite with SWC and supported Docker, Nginx, and Jenkins CI/CD deployment workflows.
- Developed reusable Material UI components for dashboards, tables, forms, and charts, while adding Jest and React Testing Library coverage for critical UI and business workflows.

Projects

Learning Management System 📄 , Next.js 16, React 19, TypeScript, Node.js,

Jul 2026

Express.js, MongoDB, Redis, RTK Query, Socket.io, Stripe, Cloudinary

- Built a production-style **Learning Management System** using **Next.js, Express.js, MongoDB, and Redis**, supporting course discovery, enrollment, secure content delivery, and role-based administration.
- Implemented **JWT authentication** with rotating refresh tokens, Redis-backed session management, and role-based authorization to secure student, instructor, and administrator workflows.
- Developed scalable REST APIs for **course management, orders, analytics, user management, and content customization**, following modular Express architecture and centralized error handling.
- Integrated **Stripe payments, Cloudinary media storage, VdoCipher secure video delivery, and Socket.io notifications**, enabling complete purchase, media, and real-time communication workflows.

- Built an admin dashboard with **Redux Toolkit, RTK Query, and MUI DataGrid**, providing course management, user administration, analytics, and responsive data-driven interfaces.

Hotel Booking Platform  , React, TypeScript, Node.js, Express.js, MongoDB, Mongoose, Clerk, Stripe, Cloudinary, TanStack Query, Tailwind CSS

Jul 2026

- Developed a full-stack hotel booking platform using **React, Express.js, and MongoDB**, enabling end to end workflows for hotel discovery, room reservations, booking management, and owner administration.
- Implemented **Clerk authentication** with user synchronization, protected routes, and webhook based account lifecycle management, ensuring secure authentication across frontend and backend services.
- Integrated **Stripe Checkout** and payment webhooks to automate booking payment confirmation and maintain reliable booking status synchronization.
- Built owner management features with **Express.js, Mongoose, and Cloudinary**, enabling CRUD operations for hotels, rooms, image uploads, booking tracking, and revenue management.
- Designed reusable REST APIs with centralized validation and MongoDB data models, supporting reviews, availability checks, booking cancellation, and scalable backend architecture.

Skills

Languages: JavaScript, TypeScript

Frontend: React.js, Next.js, Redux Toolkit, RTK Query, React Hook Form, React Router, Material UI, Tailwind CSS, Bootstrap, SCSS

Backend: Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Authentication, Clerk Authentication, Redis

Integrations: Stripe, Cloudinary, Socket.io, Nodemailer, VdoCipher

Testing: Playwright, Jest, React Testing Library

Build & Tooling: Vite, Webpack, Git, GitHub, npm

Deployment & DevOps: Docker, Nginx, Jenkins, Vercel

Concepts: MVC Architecture, Role-Based Access Control (RBAC), Authentication & Authorization, Protected Routes, File Uploads, Responsive UI Development, Error Handling

Education

Bachelor of Science (Computer Science),
NED University of Engineering and Technology

2018 – 2022
Karachi, Pakistan
